

DSES Spring Science Projects 2016

Prototypes Dr. Rich Russel

12-28-15

Manual Dish Tracking System

- Requirements
 - ETH 32 serial interface with computer
 - Decimal to Elevation/Azimuth decoder
 - Qualified Propane generator Operator
 - Qualified dish operator
 - Dish mounted camera

Encoder to Az/Alt converter

Developed by Floyd Glick

Moon Bounce

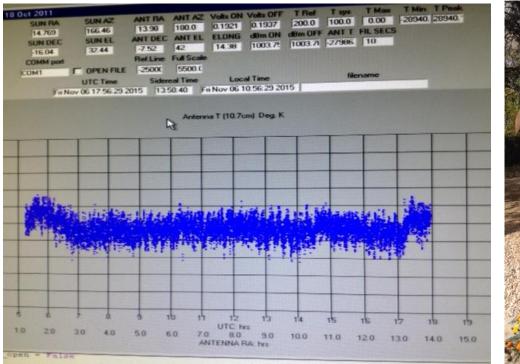

- Requirements
 - Manual Tracking System (set for Moon)
 - 1296 MHz feed
 - 1296 MHZ Transceiver
 - Computer interfaced with transceiver
 - Moon Bounce Software
 - Celestial software that provides Moon RA/DEC and/or Az/Alt
- Preparations
 - Coordinate communications with EME station via internet
 - Plan observer team trip to Plishner
 - Start generator
 - Install transceiver and computer to dish interfaces
 - Bring up dish camera and position encoders on computer
 - Inspect and test manual operation of dish
 - Verify alignment of dish
- Operations
 - Position dish to Moon and maintain manual track
 - Communicate using radio /computer interface
 - Record QSL with contact
 - Record contact in Plishner log and update procedure for lessons learned

Rotation Rate of Galaxy HI Observations

- Requirements
 - Manual Tracking System (set for HI sources)
 - 1420 MHz feed
 - Spectracyber at Plishner
 - Celestial software that provides HI Source and Galactic Plane locations
- Preparations
 - Plan observing times and pointing in order to achieve Galactic plane observations
 - Coordinate moving Spectracyber and feed to Plishner
 - Install feed on dish
 - Start generator
 - Install Spectracyber on dish interface
 - Bring up dish camera and position encoders on computer
 - Inspect and test manual operation of dish
 - Verify alignment of dish
- Operations
 - Position dish to HI source and maintain manual track
 - Record HI measurement on SpectraCyber + time, RA/DEC etc...
 - Calculate rotation rate
 - Record in Plishner log and update procedure for lessons learned

10.7 cm Sunspot Radio Telescope

- Measures Solar Flux Units
- Converts to sunspot counts

10.7cm Solar Radiometer

- Requirements
 - Solar Radiometer alignment and checkout
 - Install at prototype location (Rich or Rays)
- Operations
 - Align to Sun Az/El daily and record Solar Flux Unit
 - Compare with NOAA values
 - Calibrate results
 - Compare with Sun Spot numbers
 - Develop automated tracking process
- Results
 - When we have achieved 30 days of measurements that are within 5% of NOA values
 - Contact AAVSO to coordinate data collection
 - Contact NOAA to provide SFU data

Radio JOVE Calibration

- Requirements
 - Buy a calibration source
- Observations
 - Plan observation using calibration source before and after observations
 - Calculate absolute power measure of Jupiter output
- Future innovation
 - Develop an automated calibration capability

Observation Archiving

- Systems ready for Archiving
 - Radio JOVE
 - SuperSids
 - Meteor Scatter
 - Hydrogen Telescope
- Upload to Plishner Control Computer load weekly
- DSES members can download using TeamViewer

Certifications Recommendations

- Astronautical League Certification
 - Radio Jove
 - SuperSids
 - Meteor Scatter
 - Hydrogen Telescope
 - Itty Bitty Telescope
- Plishner Certifications
 - Propane Generator Ed Corn
 - Dish Control Ray Uberecken
